

BY WHITING DESIGN · LIVE DEMO

This isn't a website. It's a WebOS.

A web **operating system** for a service business — it books jobs, signs customers in, publishes its own content, and ranks on Google. The whole page you're on is the proof — every link is **live**. We build these.

▶ See it live

Build mine →

Why a WebOS beats a "website"

Booked jobs, not just clicks

Online booking + a customer portal turn visitors into scheduled work — 24/7, no phone tag.

It publishes itself

New blog articles go live automatically — fresh content for Google with zero manual website edits.

Found on Google

Per-page SEO, structured data, and a dedicated page for every town you serve.

Looks pro, works like software

Custom design on a fast, secure, modern stack — not a cookie-cutter template.

The whole thing, in one line

🌐 Domain → ☁️ **Cloudflare** (global CDN · SSL) → 🖥️ **Site** (15 pages · auto-blog · online booking · customer portal) → 🛠️ **Headless content & booking API**

your-site.com

├ Home (hero · services · about · reviews · gallery · latest posts)

├ Services → one page per service you offer

├ Service Areas → one local-SEO page per town you serve

├ Blog → auto-published, server-rendered

└ Book Online → live booking form embedded on-site
└ Get a Quote · Customer Login (portal)

What's inside — every module is live on this demo

Pages & navigation: a polished multi-page site with dropdown nav, sticky header, brand bar, and a mobile menu.

+ 8 city pages

Automated blog — </blog>: written/approved in a content studio, live within minutes, server-rendered for SEO, cached so it never breaks.

Online booking — </book-online>: customers schedule service right on the site.

Customer portal — passwordless "⚡ Customer Login" on every page; sign-in, booking, referrals.

Lead capture — a detailed [quote form](#), click-to-call everywhere, plus the request form below.

Local SEO — unique titles/descriptions per page, LocalBusiness structured data, and a ranking page for each town served.
